PROFESSIONAL SUMMARY

Software Engineer building production web applications, backend services, AI systems, and developer infrastructure across startups and customer facing products. Delivered systems serving 50,000+ users, automated 1,000+ weekly inbound requests with an AI agent, and reduced quote retrieval latency 28% through concurrent service integration. Strong across TypeScript, Python, Java, C++, React, Next.js, Node.js, cloud infrastructure, distributed systems, data platforms, and customer driven product development.

EDUCATION

California State University Monterey Bay

Bachelor of Science in Computer Science

Aug 2023 – Dec 2024

GPA: 3.746/4.0, Graduated one semester early

Mumbai University, India

Transferred coursework toward B.S. in Computer Science

Aug 2021 – May 2023

GPA: 9.44/10.0

EXPERIENCE

Software Engineer, Insure123 (Insurance Agency), San Jose, CA

Apr 2025 – Present

- Served 50,000+ users and 200+ agents by rebuilding the insurance quote platform with Next.js, TypeScript, Node.js, and carrier API integrations.
- Reduced quote retrieval time 28% by replacing sequential carrier requests with concurrent asynchronous processing and optimized service orchestration.
- Automated 1,000+ inbound requests weekly by shipping an OpenAI powered email agent with classification, response generation, evaluation, and human review workflows.
- Saved agents 3 to 4 hours daily by designing golden dataset evaluations, edit rate measurement, and regression checks before AI prompt changes.
- Improved production reliability 38% through incident response, root cause analysis, structured logging, monitoring, and targeted backend fixes.
- Reduced nonprofit donation friction by building a Stripe payment workflow with receipts, validation, and failure handling that increased conversion 40%.

Software Engineer, Olympiah (Social Platform Startup), Monterey, CA

Oct 2024 – Mar 2025

- Launched a sports social platform from zero by building content feeds, event posting, university profiles, follows, and backend APIs for multiple university communities.
- Increased conversational agent answer acceptance through iterative retrieval, prompt evaluation, application data preparation, and production tuning.
- Improved production diagnostics by building Python and C++ Linux tooling for automated log collection, long running process monitoring, and containerized service investigation.
- Reduced API bottlenecks under concurrent load by profiling database queries, optimizing SQL access patterns, and tuning backend request paths.
- Delivered frontend, backend, infrastructure, and AI functionality independently, reducing handoffs across product development and deployment.

Full Stack Developer Intern, DKomplex (SaaS Startup), Monterey, CA

May 2024 – Oct 2024

- Delivered a multi tenant enterprise platform with organization hierarchies, role assignments, salary tracking, and customer specific access controls.
- Converted unstructured enterprise documents into downstream NLP datasets through Python ingestion, normalization, preprocessing, schema mapping, and validation pipelines.
- Prevented cross tenant data leakage through isolated data access patterns, validation rules, permissions, and tenant aware application logic.
- Reduced customer discovery cycles by gathering requirements directly from stakeholders and translating business workflows into product features.

Student Web Developer, CSUMB (Student Government), Monterey, CA

Aug 2023 – May 2024

- Served 8,000+ students by rebuilding the Associated Students website with React, reusable components, structured content, and accessible interfaces.
- Reduced future development overhead 35% by replacing legacy frontend patterns with reusable components and CI/CD automation.
- Improved application performance by refactoring legacy data flows and simplifying content retrieval across frequently accessed pages.

PROJECTS

ContextIQ – Production RAG System | [GitHub](#) | [Live](#)

2026

- Built a production RAG system with document ingestion, 500 token chunking, batched embeddings, pgvector storage, and retrieval evaluation.
- Improved retrieval reliability by choosing exact search over IVFFlat for small datasets and adding cosine similarity fallback for empty SQL results.
- Streamed GPT 4o responses through SSE with source attribution, re upload deduplication, and automated keep alive checks maintaining 99%+ uptime.

DevWatch – GitHub Analytics and QA Platform | [GitHub](#) | [Live](#)

2026

- Built a developer analytics platform with Java 21, Spring Boot, PostgreSQL, Next.js, TypeScript, GitHub OAuth, and REST APIs.
- Automated repository analysis with Python, GitPython, and Click to classify tests, calculate quality metrics, and generate repository health reports.
- Deployed three CI/CD pipelines for Node, Java, and Python services and resolved production networking and CORS failures without a dedicated DevOps team.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, C++, C#, Go, SQL, Bash

Frameworks & Technologies: React, Next.js, Node.js, Express, Spring Boot, FastAPI, .NET Core, PostgreSQL, MySQL, Supabase, pgvector, Redis, REST APIs, OpenAI API, Anthropic API, HuggingFace, LangChain, Docker, Kubernetes, AWS, Azure, GCP, GitHub Actions, Linux, Git, Tableau

Core Competencies: Software Engineering, Backend Development, Full Stack Development, AI Engineering, RAG, Agents, Distributed Systems, API Design, Data Pipelines, Cloud Infrastructure, CI/CD, Production Debugging, System Reliability, Data Modeling, Technical Problem Solving, Customer Requirements
