PROFESSIONAL SUMMARY

Software Development Engineer with experience building **scalable distributed systems, cloud-native microservices, and AI-integrated data platforms** using **Java**, Python, TypeScript, and SQL. Strong foundation in **object-oriented design, algorithms, data structures, and operational excellence** with a proven track record of owning full software development lifecycles in fast-moving agile environments.

EXPERIENCE

Software Engineer, Insure123 Insurance Agency Inc., San Jose, CA Apr 2025 – Mar 2026

- Designed and built cloud-native platform using Java, TypeScript, Node.js, and AWS S3 serving 50,000+ users with scalable microservice architecture.
- Reduced manual processing overhead by 100% building AI-powered automation agent using OpenAI API processing 1,000+ weekly transactions end to end.
- Improved system fault tolerance by 38% resolving distributed production failures through monitoring, debugging, and operational excellence improvements.
- Engineered serverless workflows using AWS Lambda and DynamoDB improving async query throughput by 28% across distributed data processing verticals.
- Owned full software development lifecycle from design through deployment maintaining CI/CD pipelines and resolving production issues on-call.

Software Engineer, Olympiah, Monterey, CA Oct 2024 – Mar 2025

- Built scalable distributed platform using Java, TypeScript, Node.js, PostgreSQL, and AWS S3 supporting high-throughput real-time data publishing at production scale.
- Improved GenAI agent response accuracy by 31% iterating on LLM prompt logic and retrieval algorithms across post-deployment production workflows.
- Contributed to code reviews and technical documentation driving adoption of clean code best practices across distributed system components.
- Scaled fault-tolerant data delivery using AWS DynamoDB, SQL optimization, and REST APIs supporting concurrent user interactions at enterprise scale.

Full Stack Developer Intern, DKomplex, Monterey, CA May 2024 – Oct 2024

- Delivered multi-tenant SaaS platform using Java, Node.js, and PostgreSQL applying object-oriented design principles across distributed enterprise data systems.
- Reduced manual data processing overhead automating internal reporting workflows using Python scripts across multi-tenant SQL database structures.
- Improved data isolation reliability engineering fault-tolerant PostgreSQL backend with zero cross-tenant leakage across enterprise customer accounts.
- Participated in agile development cycles contributing version-controlled features through code reviews and iterative SDLC practices.

Student Web Developer, CSUMB, Monterey, CA Aug 2023 – May 2024

- Improved platform performance rebuilding production web systems serving 8,000+ users applying scalable frontend architecture and optimization patterns.
- Reduced page load time refactoring legacy codebase implementing modern design patterns and component-based architecture across production systems.
- Accelerated content deployment developing reusable UI components and streamlined CI/CD workflows reducing development overhead by 35%.

PROJECTS

DevWatch – Distributed GitHub Analytics and QA Platform | [GitHub](#) 2026

- Built distributed analytics platform using Java 21, Spring Boot 3.2, Next.js 14, and PostgreSQL with real-time CI/CD monitoring across connected repositories.
- Reduced QA reporting time generating AI-powered repo health reports via HuggingFace Mistral 7B applying GenAI tools for development productivity at zero cost.
- Improved static analysis coverage building Python CLI scripts using data structure traversal algorithms computing quality scores across connected codebases.
- Resolved cloud infrastructure IPv4/IPv6 incompatibility between Railway and Supabase ensuring zero-downtime production deployment through operational debugging.

ContextIQ – RAG Document Intelligence Platform | [GitHub](#) 2026

- Built scalable RAG pipeline using Next.js, OpenAI, and Supabase pgvector applying NoSQL vector storage with 1536-dim embeddings at production scale.
- Improved fault tolerance engineering cosine-similarity fallback and cron keep-alive ensuring 99%+ uptime across distributed Vercel production environment.
- Reduced query latency implementing SSE streaming architecture delivering GPT-4o responses token-by-token demonstrating distributed systems design principles.

EDUCATION

California State University Monterey Bay

Bachelor's in Computer Science

GPA: 3.746/4

Relevant Coursework: Distributed Systems, Software Architecture, Advanced Algorithms, Data Structures, Database Systems

Mumbai University, India

Bachelor's of Science in Information Technology

GPA: 9.44/10

Relevant Coursework: Object-Oriented Design, Systems Design, Database Management, SDLC

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++

Frameworks & Technologies: Spring Boot, Next.js, Node.js, React, REST APIs, PostgreSQL, NoSQL, Docker, GitHub Actions, AWS, OpenAI API

Core Competencies: Distributed Systems, Cloud-Native Architecture, Microservices, CI/CD, Operational Excellence, GenAI Tools, Algorithm Design
